The main theme for the look and feel is fixed so please do not change the primary ,secondary color theme and typography font type.

For icons you can refer to:
https://feathericons.com/
https://material.io/resources/icons/?style=baseline

For material-ui api refer to:
https://material-ui.com/getting-started/usage/

For how material-ui reference color palette refer to:
https://material-ui.com/customization/color/#color-palette

On how you should structure and create your own pages, please reference the way we structure our sample pages under the views folder:

Buttons

For using button with default primary color:

```
<Button variant="contained" color="primary" >
    Analytics
</Button>
```

For using the different actions buttons with the 3 color scheme you need to import:

```
import { OkButton, ActionButton, CancelButton } from 'src/components/Buttons'
```

```
<ActionButton variant="contained" className={classes.exportButton}>
    rescan
</ActionButton>

<OkButton variant="contained" className={classes.exportButton}>
    ok
</OkButton>

<CancelButton variant="contained">
    cancel
</CancelButton>
```

Chips

For using the different chip status with the 3 color scheme you need to import:

```
import {CompletedChip, PendingChip, UnCompletedChip} from 'src/components/StatusChips'
```

```
<PendingChip
      label={order.status}
      size="small"
      variant="outlined"
/>
```

```
<CompletedChip
      label={order.status}
      size="small"
      variant="outlined"
/>
```

```
<UnCompletedChip
      label={order.status}
      size="small"
      variant="outlined"
/>
```

Breadcrumbs

Each page needs to have a breadcrumb and a divider below the breadcrumb, when you create a new page, remember to have a breadcrumb for the user to navigate back. Do refer to ==each sample views BreadCrumb.js== for more information

```
<Breadcrumbs separator={<NavigateNextIcon fontSize="small" />} aria-
label="breadcrumb">
        <Link
                color="textPrimary"
                href=""
                onClick={handleClick}
                aria-current="page"
        >
                Home
        </Link>
</Breadcrumbs>
<Divider />
```

Navigation Top bar and Side Bar

For the navigation top bar and side bar, refer to ==**layouts > DashboardLayout**== **ONLY**.
To edit the top bar, refer to ==TopBar.js==
To add more new navigation links to the fixed side bar refer to ==**NavBar > index.js**==

Append your items to this item list:

```
const items = [
  {
    href: '/app/dashboard',
    icon: HomeIcon,
    title: 'Home'
  },
  {
    href: '/app/customers',
    icon: UsersIcon,
    title: 'Customers'
  },
  {
    href: '/app/products',
    icon: ShoppingBagIcon,
    title: 'Products'
  },
  {
    href: '/app/settings',
    icon: SettingIcon,
    title: 'Settings'
  }
  <add here only>
];
```
